

VEHICLE SAFETY/POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic Vehicles

CAMPAIGN No.	2 5 8 0	DATE	Jul.22.2010
MANUFACTURER	N I S S A N		
DESCRIPTION OF DEFECT	<p>① Due to an inappropriate program for the DPF (Diesel Particulate Filter) when the vehicle is driven with low load, excessive fuel may be injected into the engine oil. This can cause the volume of engine oil may exceed the specified level. If the vehicle continues to be driven in this condition, the engine oil can be inhaled into the air intake system, and the engine may be occurred the white smoke, and the engine revolution may be increased. In an extreme case, the engine may stall and can not be restarted.</p> <p>② Due to an insufficiency the durability of the hazard switch on the vehicles were equipped the side turn lamps, the contact point of the hazard switch may wear excessively by the turning on the electricity when the switch is operated. In an extreme case, the hazard warning signal flasher may be inoperative even though the hazard switch is turned on.</p> <p>③ Due to an inappropriate design of the circuit in the electronic flasher unit on the vehicles were equipped the side turn lamps, the contact point of the turn signal switch may wear excessively by the turning on the electricity when the switch is operated. In an extreme case, the turn signal lamps may be inoperative even though the turn signal switch is turned on.</p> <p>④ Due to an inappropriate the shape of the bracket for fitting the fuel filter, the clearance between the shift linkage of the transmission and the fuel hose might be insufficient, and the fuel hose may interfere with the shift linkage by the shift operation during the driving.</p>
