

VEHICLE SAFETY / POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic / Import Vehicles

CAMPAIGN NO.	2759	DATE	June 2 ,2011
MANUFACTURER	ISUZU MOTORS LIMITED		
DESCRIPTION OF DEFECT	<p>(1) Because a backup light switch harness wiring to detect the manual transmission is in reverse is connected incorrectly on a light-duty truck, the harness bracket may vibrate and cause the harness to be bent sharply, and the harness cover to be damaged. If the vehicle is continued to be used in this condition, the harness can be disconnected, with the result of the backup light failing to turn on even when the transmission is in reverse.</p> <p>(2) Because the bellows tube for the EGR cooler (exhaust gas recirculation system) on a light-duty van body truck or reefer truck is not strong enough, the tube may shrink and crack when heated by exhaust gas. If the vehicle is continued to be used in this condition, the crack may progress and exhaust gas may start to leak.</p>
