

VEHICLE SAFETY/POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic Vehicles

CAMPAIGN No.	3055	DATE	Nov.14.2012
MANUFACTURER	TOYOTA		
DESCRIPTION OF DEFECT	<p>#1 In the steering system of the subject vehicles, due to insufficient hardness on the gear box side of the intermediate extension shaft which connects steering wheel to the steering gear box, there is a possibility that backlash may develop at the connected portion of the extension shaft if the steering wheel is frequently and forcefully turned to the full-lock position while driving at a slow speed. If the vehicle is continuously operated in this condition, the connected portion may wear out, which could result in loss of steering ability.</p> <p>#2 In the electric water pump for the inverter of the hybrid system, there is a possibility that the coil wire may have been scratched due to the improper coiling manufacturing process. In this condition, the coil wire may corrode and break, causing the water pump to stop, which could lead to illumination of warning lights or a limited motive power mode. If short circuit occurs between adjacent coil wires, the fuse for the electric power supply may blow, causing the vehicle to be unable to be operated.</p> <p>Inverter: Electrical power converter that changes high-voltage direct current to alternating current</p>
