

VEHICLE SAFETY/POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic Vehicles

CAMPAIGN No.	4140	DATE	Nov.15.2017
MANUFACTURER	TOYOTA		
DESCRIPTION OF DEFECT	<p>In the battery for driving of the Plug-in hybrid vehicles, due to inadequate capacity of the EV fuse that is designed to protect the hybrid system from potential damage, there is a possibility that the fuse could develop a fatigue fracture if the vehicle is repeatedly operated under high-load driving conditions. If this were to occur, the warning lights would illuminate and, in the worst case, the hybrid system could shut down resulting in the vehicle stopping.</p>		

TYPE	COMMERCIAL NAME	MODEL YEAR RECALLED	NUMBER OF VEHICLE
DLA-ZVW35	[PRIUS PHV]	2011-2015	20,442
		TOTAL	20,442
