## VEHICLE SAFETY / POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic Import Vehicles

CAMPAIGN No.	Gai-2809	DATE	2019/3/27	
MANUFACTURE	Daimler AG			
	(Japanese Importer : Mercedes-Benz Japan Co,. Ltd. )			
DESCRIPTION OF	On certain S-Class 4Matic vehicles (217, 222 platform, facelift) with DISTRONIC PLUS and			
DEFECT	steering assistant the Hands-off-Detection function (HoD) might not meet specifications.			
	When the steering assistant is active, the HoD function monitors whether and how long the			
	driver takes the hands off the steering wheel. This monitoring is performed by measurement			
	of internal torque values of the steering system. In case of the identified malfunction, the			
	steering assistant could remain active permanently despite the driver leaving his hands off			
	the steering wheel over a longer period of time.			
	In such case, the defined subsequent warnings - including the ultimate system reaction of			
	bringing the vehicle to a complete stop - might not be triggered as intended. This would			
	increase the risk of a crash. Further, legal requirements could not be met.			
	The distance control and the steering assistant as well as all further functions of the			
	advanced driver assistance systems would continue to work without restrictions and as			
	intended.
