

VEHICLE SAFETY/POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic Vehicles

CAMPAIGN No.	2568	DATE	Jun.30.2010
MANUFACTURER	TOYOTA		
DESCRIPTION OF DEFECT	<p>In the airbag system of the subject vehicles, due to improper assembly of the airbag inflator, which is used in the passenger side front airbag, some inflators were produced with an insufficient amount of gas generators. In this condition, gas generators in the inflator may become broken and powdered by vehicle vibration over time. This can create abnormal pressure in the inflator body during airbag activation, causing it to break and scatter. This increases the risk of personal injury during airbag inflation.</p>
