

VEHICLE SAFETY/POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic Vehicles

CAMPAIGN No.	2598	DATE	Aug. 27, 2010
MANUFACTURER	DAIHATSU		
DESCRIPTION OF DEFECT	<p>On a hybrid motor, it is possible that excessive load might be applied to the bearing due to dimensional dispersion occurred in the manufacturing process, which is caused by improper control of the processing machine. Grease applied to the bearing affected may be deteriorated due to heat of the bearing when it is working. Accordingly, if a vehicle with this condition is used continuously, it could possibly result in engine cutting out.</p>
