

VEHICLE SAFETY/POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic Vehicles

CAMPAIGN No.	2694	DATE	Jan.26.2011
MANUFACTURER	TOYOTA		
DESCRIPTION OF DEFECT	<p>1. In the fuel pipe of the subject vehicles, due to insufficient strength evaluation in consideration of the variation of the machining, if the shrinkage of the pipe wall thickness becomes large during the machining, the stress at that portion may become high, causing a small crack to develop when exposed to the corrosive ingredient in fuel. If the vehicle is continuously operated in this condition, the crack may expand during fuel pressure fluctuation, and fuel could leak from the crack in the pipe.</p> <p>2. In the high pressure fuel pump of the subject vehicles, due to insufficient sealing performance evaluation in consideration of the variation of the gasket located between the fuel pump and the check valve, in long-term vehicle use, stress relief may occur on the gasket, causing the force fastening the check valve to degrade. If the vehicle is continuously operated in this condition, fuel could leak through the threaded portion of the check valve.</p>
