

VEHICLE SAFETY / POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic / Import Vehicles

CAMPAIGN NO.	2847	DATE	November 4 ,2011
MANUFACTURER	ISUZU MOTORS LIMITED		
DESCRIPTION OF DEFECT	<p>In the hybrid L/D trucks, it has been found that, in the wake of an inadequate fastening structure of the hybrid motor bracket, there occurred a clearance between the frame cross-member and the bracket. Thus, excessive stress is produced in the motor bracket fixing bolts from input, etc., received during running. If they are used as are, the bolts will be broken. If it occurs, there is a possibility that, in the worst case, the motor comes off.</p>
