

VEHICLE SAFETY / POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic / Import Vehicles

CAMPAIGN NO.	2947	DATE	May 31 ,2012
MANUFACTURER	ISUZU MOTORS LIMITED		
DESCRIPTION OF DEFECT	<p>Regarding engines for heavy-duty trucks,</p> <p>(1) The strength of the bearing and shaft in the bearing case which actuates the supply pump, is not sufficient, for which the bearing is likely to be damaged and the shaft may have cracks. If a truck having the above condition continues to be used, the shaft, the coupling attached to the supply pump, and the gears will be damaged, which may lead to a situation in which the truck does not move or needs larger steering efforts.</p> <p>(2) Due to the inadequate position of the blow-by gas outlet, the engine oil is sucked in the intake pipe via the blow-by gas passage when the truck runs on a steep slope. The oil burns in the cylinder, which makes the engine rev up, and if things go wrong, the engine gets damaged from inside and cannot restart.</p> <p>(3) As the fuel injection control program to cope with high coolant temperature is inadequate, the piston temperature goes up, resulting in excess load to the piston. For this reason, if a truck having the high-temperature coolant continues to be used, the piston will have cracks developing into a hole. This situation may lead to engine power decline and white engine smoke, and if things go wrong, may result in an inability of the truck to run.</p>
