

VEHICLE SAFETY/POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic Vehicles

CAMPAIGN No.	3191	DATE	Jul. 18 2013
MUNUFACTURER	Mitsubishi Fuso Truck and Bus Corporation		
DESCRIPTION OF DEFECT	<p>① On some heavy-duty trucks and buses, the air discharge from the safety valve (which opens when the pressure in the air lines become excessive to protect the air lines) is insufficient, causing high pressure in the air lines. This in turn causes unwanted operation of the ASR valve (a solenoid valve used for temporarily applying the brakes on slippery road surfaces to prevent the tires from spinning) resulting in brake drag. If the vehicle continues to be used in this condition, the brakes may overheat. In the worst case, a fire will occur.</p> <p>② On some heavy-duty trucks with air brakes, an inappropriate material is used for the rubber parts of the reducing valve (a pressure reduction valve used for switching between the 4-bag air suspension air tank pressure and the brake air tank pressure, on rear tandem-axle trucks) in the multi protection valve (which blocks the circuit if any of the brake air lines fails, to ensure air pressure in other lines). Oil in the compressed air may let the rubber deteriorate. If the pressure in the air lines become excessive due to insufficient pressure reduction, the ASR valve may operate causing brake drag. If the vehicle continues to be used in this condition, the brakes may overheat. In the worst case, a fire will occur.</p>		

TYPE	COMMERCIAL NAME	MODEL YEAR RECALLED	NUMBER OF VEHICLE
LDG-FV50VJR	「FUSO SUPER GREAT」	2010~2011	6
LDG-FV50VX		2010	1
