

VEHICLE SAFETY/POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic Vehicles

CAMPAIGN No.	3263	DATE	November 29,2013
MANUFACTURER	MITSUBISHI MOTORS CORPORATION		
DESCRIPTION OF DEFECT	<p>In the condense tank for the engine cooling system which is the device to separate the air bubble in the coolant, if the engine is running at high revolution, the air bubble separating function may not function properly causing the coolant to be overflowed.</p> <p>If the coolant overflows repeatedly and use continues under the condition without sufficient coolant, the engine overheat would occur and in the worst case scenario, the engine could stall and could not be restarted.</p>
