

TIRE SAFETY RECALL CAMPAIGN IN JAPAN

Domestic Tires

CAMPAIGN No.	装7	DATE	7 Nov. 2013
MANUFACTURER	Bridgestone Corporation		
DESCRIPTION OF DEFECT	<p>Tire (Possible airleakage from a side wall): Instances of a crack at the innerliner splice of a tire may be observed in certain models/sizes of truck and bus tires manufactured at the Tochigi plant. The crack may result from decreased adhesion level of the splice of the innerliner where a building machine experienced instances of a problem following an innerliner production change. Such a crack could extend during continuous operation and penetrate a sidewall, which could lead to accumulation of air and a bulge on the sidewall and eventually, in the worst case, air leakage disabling the tire. This condition does not comply with article 9 of the technical standard as specified by the Road Transport Vehicle Act, as well as item 7 of article 11-2 and item 2 of article 11-3 of the notice stipulating the details of such standard. However, we expect such an air leak would be very rare, and we have not received any reports of rapid air loss or tire rupture. All the subject tires will be checked inside to detect any possibility of occurrence of the above instances as follows: Any tire in which a crack, line, or blister is detected should be replaced with a new tire.</p> <p>Recall will be initiated in three phases as detailed below:</p> <ul style="list-style-type: none"> ① 1st Step: 8 Nov. 2013 ② 2nd Step: 22 Jan. 2014 ③ 3rd Step: 1 Apr. 2014
