

VEHICLE SAFETY / POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic / Import Vehicles

CAMPAIGN NO.	3319	DATE	March 4 ,2014
MANUFACTURER	ISUZU MOTORS LIMITED		
DESCRIPTION OF DEFECT	<p>When the control unit, regulating the ABS, mechanical automatic transmission, and 4-wheel drive system, is installed under the instrument panel in a truck, it tends to have the coolant dripping on it from the heater situated above it. The reason is that the coolant (anti-freezing fluid), circulating inside the heater, helps the cooling lines be rusted, if the coolant is not maintained (i.e. replaced) properly. The rust will generate a crack in the heater core to allow the coolant to leak and drip down on the control unit. If the truck is continuously used under such a condition, there is a possibility that the coolant will intrude in the control unit and let the control circuits short. This will turn the warning light on, resulting in an uncontrollability of the control unit, and what's worse, a fire may break out.</p>
