

VEHICLE SAFETY/POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic/Import Vehicles

CAMPAIGN No.	3463	DATE	Nov.18.2014
MANUFACTURER	Hino Motors, Ltd.		
DESCRIPTION OF DEFECT	<p>On certain heavy duty trucks, due to the inadequate program of engine control and the setting of an EGR (Exhaust Gas Recirculation) valve, when manual regeneration of DPR (Diesel Particulate Active Reduction system) is frequently interrupted, the fuel injected by the post injection flows into an EGR cooler, the deposition of carbon is formed inside the EGR cooler and it adheres to intake valves. If the truck is parked for a long time under the condition, the viscosity of the deposition may increase. Therefore when the engine is started, the intake valves may not slide properly. In the worst case, the intake valves may break, resulting in an abnormal noise and the engine stop.</p>
