

VEHICLE SAFETY / POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic / Import Vehicles

CAMPAIGN No.	Gai-2157	DATE	2015/3/10
MANUFACTURE	Daimler AG (Japanese Importer : Mercedes-Benz Japan Co., Ltd.)		
DESCRIPTION OF DEFECT	<p>There was a visual design change on the engine compartment seal on E-Class (model series 212) and CLS-Class (model series 218) vehicles. The visual feedback of the correct seating of the engine compartment seal was limited as a result during the installation. If the engine compartment seal was not fastened to the partition wall as planned, the seal might temporarily adhere to the engine hood when it is opened. In this case, the engine compartment seal might partially detach from the partition wall.</p> <p>In unfavorable circumstances, a partially detached engine compartment seal may fall into the gap between the engine and the partition wall. If a long enough part of the engine compartment seal is detached and falls into the gap between the engine and the partition wall, it cannot be ruled out that the loose end of the engine compartment seal comes in contact with parts of the exhaust system, in particular the catalytic converter. If the catalytic converter is hot enough, a potential risk of fire cannot be ruled out.</p>
