

VEHICLE SAFETY/POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic Vehicles

CAMPAIGN No.	3565	DATE	May 14, 2015
MANUFACTURER	DAIHATSU		
DESCRIPTION OF DEFECT	<p>As a result of having investigated inflators collected from the market, airtightness of some driver's airbag inflators were found insufficient. Therefore, atmospheric moisture might enter such an inflator and gas generating propellant absorbs the moisture while a vehicle is used for a long term. Consequently, it is possible that an affected airbag might not deploy normally.</p>
