

VEHICLE SAFETY/ POLLUTION RECALL CAMPAIGN IN JAPAN

Import Vehicle

CAMPAIGN No.	GAI-2335	DATE	May 31,2016
MANUFACTURER	TADANO LTD.		
DESCRIPTION OF DEFECT	<p>Due to inadequate installation of the air hoses installed in power transmission and braking devices, there are cases of air leaking from hoses when the hoses become unattached at the joint. With such air leaks, the air tank pressure drops and the warning light is lit. Continued use in this condition may lead to, in the worst case, a reduced braking force of brake function and the power transmission being forced into to the neutral position causing a travel failure.</p>
