

VEHICLE SAFETY/POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic Vehicles

CAMPAIGN No.	3945	DATE	Nov.24.2016
MANUFACTURER	TOYOTA		
DESCRIPTION OF DEFECT	<p>1. In the fuel injection system of the subject vehicles, due to insufficient strength of the fuel pump and the fuel injection nozzle, there is a possibility that a crack could develop on the portion of the fuel passage. If fuel leaks and fuel pressure decreases, the engine warning light may illuminate causing the motive power to be restricted, in the worst case, resulting in the engine becoming inoperative.</p> <p>2. In the engine control computer of the subject vehicles, due to improper control of the exhaust gas recirculation, there is a possibility that the fuel injection nozzle end opening could be corroded by moisture in exhaust gas and such portion could expand. In this condition, the amount of injection may increase and PM may accumulate in the catalytic converter. If this occurs, the engine warning light may illuminate causing the motive power to be restricted, in the worst case, resulting in the catalytic converter becoming damaged which could cause black exhaust gas to be emitted.</p>		

TYPE	COMMERCIAL NAME	MODEL YEAR RECALLED	NUMBER OF VEHICLE	NOTE
LDF-KDH201K	[HIACE] [REGIUS ACE]	2010-2015	79,019	#1,2
