

Roadmap towards Air Transportation Revolution

20 December 2018 Public-Private Council for Air Transportation Revolution

This Roadmap depicts a flow of technology developments and establishment of regulations which should be progressed with public-private cooperation. The Roadmap focuses on possibility that realization of more familiar and convenient air transportation means by so-called "a flying vehicle" – an electrified, vertical takeoff and landing, and pilotless aircraft – will lead to solve issues in both urban and regional areas.
 (Note) It should be recognized that a grand design pertaining to use of the sky will be necessary under developmental trends of other transportation equipment and system.
