

VEHICLE SAFETY RECALL CAMPAIGN IN JAPAN

Domestic Vehicles

CAMPAIGN No.	4845	DATE	Nov. 19, 2020
MANUFACTURER	SUZUKI MOTOR CORPORATION		
DESCRIPTION OF DEFECT	<p>Due to the improper control of the manufacturing process of the discharge (HID) head lamp, the volatile compound of silicon may contaminate the packing seal in the head lamp socket.</p> <p>The silicon compound may vaporize by the heat from the light bulb and it may become vapor deposition stuck on the HID bulb socket contact surface. Due to the arc discharge heat in the contact surface, the vapor deposition of the silicon compound then turns into the oxide silicon that may lead to the conduction failure and the head lamp malfunction.</p>		

TYPE	COMMERCIAL NAME	MODEL YEAR RECALLED	NUMBER OF VEHICLES
DBA-MR31S	HUSTLER	2013~2015	95,590
