

VEHICLE SAFETY / POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic ~~Import Vehicles~~

CAMPAIGN No.	Gai-3991	DATE	2025/5/15
MANUFACTURE	Mercedes-Benz AG (Japanese Importer : Mercedes-Benz Japan G.K.)		
DESCRIPTION OF DEFECT	<p>On certain AMG GT Coupe (192 platform), S-Class (223 platform), SL (232 platform), GLC (254 platform) and AMG GT 4-doors Coupe (290 platform) vehicles with hybrid powertrain, the processor of the control unit of the high-voltage starter generator might experience sporadic overload.</p> <p>Consequently, the monitoring function of the system might erroneously detect a component defect. In this case, the functions of the high-voltage starter generator might be deactivated which could lead to an unexpected loss of propulsion. In consequence the risk of a crash might be increased.</p> <p>If the driving cycle could be continued depending on the driving situation, this would only be possible with the combustion engine and for a short duration due to the discharge of the 12V battery. Consequently, the exhaust emission values might be increased during the short period until the vehicle is parked.</p>
