| MANUFACTURER          | SUBARU CORPORATION                                                                                                                                                                                                                                                                                                                                        |         |              |
| DESCRIPTION OF DEFECT | The bolt attaching water pipe to the engine may have been insufficiently tightened during engine assembly process. If the vehicle continues to be operated in this condition, the insufficiently tightened bolt could come off and coolant could leak. In the worst case, coolant could come in contact with exhaust pipe, potentially leading to a fire. |         |              |
