

VEHICLE SAFETY/POLLUTION RECALL CAMPAIGN IN JAPAN

Domestic Vehicles

CAMPAIGN No.	5 8 0 0	DATE	Mar. 26. 2026
MANUFACTURER	N I S S A N		
DESCRIPTION OF DEFECT	<p>In certain modules within the high-voltage battery pack, the fragments of electrode plates generated during the process adhere to the electrode plate due to improper manufacturing process of the electrode plates used in the cells.</p> <p>Therefore, repeated battery charging may cause a short circuit inside the module, leading to the display of a battery malfunction warning. In the worst case, abnormal overheating of the battery may occur, potentially resulting in a fire.</p>
