| MANUFACTURER          | Yokohama Sharyo Kogyo Co., Ltd.                                                                                                                                                                                                                                                                                                               |                     |                   |
| DESCRIPTION OF DEFECT | Cracks may develop in the intermediate fender stays due to insufficient strength analysis, caused by vibration during operation. Therefore, if the vehicle continues to be used in this condition, the cracks may propagate and cause the stay to break; in the worst-case scenario, the fender stay could detach and obstruct other traffic. |                     |                   |
