

1-17. Horizontal Sliding Belt Diverter

Category	Area	Baggage Handling
	Theme	Improving passenger convenience

Product Summary

- World's only provider of this solution with the most installations. (International patent).
- The belt diverter is a type of belt conveyor that allows for horizontal diverting without impacting baggage.

Features

- Since no impact is imparted to baggage, the belt diverter is ideal as an inline screening diverter (airport explosive detection systems).
- Since the diverter is level with upstream conveyor and has no gaps, baggage loading is smooth and continuous for safe, high-performance sorting.
- Sorting capacity up to 2400-3600 bags/hour
- Can accommodate various shapes of baggage
- Our special belt guide to prevent slippage makes replacement easy.

Applications

- Within the airport restricted area

Past Installations

- Japan: Haneda Airport, Chubu Airport, Kansai Airport, New Chitose Airport, Fukuoka Airport, other facilities.
- Overseas: (Thailand) Trang Airport, (Malaysia) Kuala Lumpur Airport etc...
