

## **Ashoro Museum of Paleontology**

The Ashoro Museum of Paleontology displays numerous rare prehistoric fossils excavated in Ashoro, replicas of extinct marine mammals, and full-size skeletons of whale species that swim in Hokkaido's waters today.

Hands-on educational activities in the paleontology lab, such as building your own *Desmostylus* replica or conducting a mini-excavation, make the Ashoro Museum of Paleontology a fun environment for all ages and an ideal place to spend a rainy day.
