

## **Ryogoku Bridge**

The colors of the LED light installation featured on this bridge respond to changes in temperature, ambient noise levels, vibrations from traffic, and even the cosmic rays from outer space. Artist Osaka Takuro chose an environmental focus for this work, prompting observers to consider the effects of their activities on their surroundings. Entitled “Sora to Mizu” (Sky and Water), it was one of the two winning designs at the 2010 Tokushima LED Art Festival. Born in Tokyo, Takuro is considered a pioneer in the field of light art. He frequently draws on nature and science themes for his creations.
